

Cemoc – an overview

At Cemoc we understand more than most that technology is not something deployed for its own sake. Instead, we believe that technology should support an organisation not just by operating efficiencies but also by enabling competitive advantage.

Founded in 1982, Cemoc is an independent IT specialist headquartered on the Isle of Wight, providing support, application development and IT consultancy services to local, regional and international clients. The company was acquired from its founders in 2002 by the technical management team, who combine over 35 years of hands-on experience within the company.

As strategic thinkers, we take time to understand our clients' business objectives, applying our in-depth technical knowledge as well as our experience of industry best practice to focus and optimise client IT investment into the areas where it is most effective.

This approach allows us to work closely with our clients to implement IT solutions within defined budgets and timescales, while our total system support and ongoing development services ensure that clients continue to benefit from their investment in IT.

Cemoc House

Considerable investment is made in facilities, training and our knowledge base to ensure that Cemoc solutions, staff and service remain at the highest standards of professional competence.

This expertise and commitment makes us a recognised and accomplished partner to leading global IT organisations, including: Microsoft, Computer Associates, Cisco and SSA Global Technologies. These partnerships allow Cemoc early access to new software versions and industry trends, as well as providing direct escalation routes, if required, for even the most challenging of support incidents.

At Cemoc we are able to deliver support, application development and IT consultancy services that not only meet our clients' demanding requirements, but are capable of evolving to take advantage of new and emerging technologies, giving our clients, irrespective of their size or nature of industry, a distinct advantage in today's increasingly competitive business world.

Professional IT Services with Total System Support

Cemoc – Professional IT Services

The increasingly complex interactions within today's IT systems demand a broad competency if unforeseen consequences from interventions are to be avoided. Cemoc clients benefit from our extensive investment in our knowledge base, whether from rapid and authoritative responses to support issues, or in the efficient design of secure networks or productive software applications.

Cemoc clients can be assured of professional service delivery by technically qualified systems engineers or developers, who, where appropriate, have additional relevant consulting expertise in the software application and/or business processes involved. Our flexible Total Systems Support options allow clients to select the level of ongoing support that is right for their needs.
